English

UX/UI Designer • Lucilab

2021 – Present

I designed core features (goals, appointments, questionnaires), improved completion rates for goals and questionnaires, strengthened visual consistency through a design system, and contributed actively to product strategy.

- Designed user flows aligned with product goals: goal creation, appointment booking, questionnaire completion
- Created wireframes, prototypes, and high-fidelity responsive mockups
- Designed AI-powered Q&A experience using a RAG model, including UX for direct answers and contextual result lists
- Conducted user testing with diverse methods (moderated, unmoderated, participatory workshops) to validate solutions
- Iterated designs based on user feedback and continuous research strategy
- Guided product strategy by identifying high-impact opportunities aligned with user and business goals
- Built and maintained a design system with reusable components
- Collaborated closely with PMs, developers, domain experts, and designers
- Championed team adoption of AI tools: created several custom GPT agents to support UX workflows, ran walkthroughs, and coached peers to build their own; helped the design team work faster and more efficiently

UX Research Consultant • CubeHX

Apr – Dec 2020

I supported companies in the food, medical, and retail sectors in evaluating and optimizing the user experience of their products.

- Conducted interviews to identify customer needs
- Led generative interviews to understand users' needs and mental models
- Designed web and mobile mockups and prototypes at various levels of fidelity
- Planned and moderated research, including remote testing
- Analyzed qualitative and quantitative data to extract insights and answer research questions
- Synthesized findings into clear and actionable reports
- Provided specific and tailored UX recommendations to clients through high-quality deliverables

Junior UX Analyst • Tech3Lab

2019 – 2020

- Selected appropriate research methods based on client objectives
- Planned and moderated qualitative and quantitative data collection
- Used physiological measurement tools (eye tracker, EDA, FaceReader)
- Conducted in-depth qualitative and quantitative analyses
- Created high-quality deliverables
- Presented research findings to stakeholders
